PROJECTS

Social Media App - Twigram

Twigram can be created by using Django Python. This is a social media app is a platform designed to connect people, allowing them to share content, engage in discussions, and discover new communities. Central to these apps are user profiles, where individuals can showcase their interests, upload profile photos, and write a bio to express themselves.

Restaurant Website

A restaurant webpage typically includes specific sections designed to engage visitors, provide essential information, and make it easy to interact with the restaurant. And it could be created by using a HTML. Here, the restaurant's name, tagline, and a primary call-to-action button.
